Alejandro Camerlengo

Summary

Data Engineer with a background in Data Science and Corporate Finance. Experienced across the complete data lifecycle, from designing cloud architectures and automated pipelines to deploying analytical models and data applications.

Core Skills

Platforms & Cloud: Snowflake (Snowpark, Tasks & Streams), Databricks, Azure (ADF, Blob, DevOps), AWS (S3, EC2), Git (GitHub)

Pipelines & Orchestration: Python, SQL, Spark, dbt, Airflow, Airbyte (ETL), Fivetran (Reverse ETL)

AI & Automation: Agentic Workflows (Antigravity, LLMs), Custom API Integrations, ML (Anomaly Detection, Causal Inference & Forecasting)

Analytics (BI) & Applications: Power BI (DAX, Power Query), Superset, Streamlit, Plotly, Data Modeling

Experience

Data Engineer | Tongo (Fintech Startup) | United States of America (Remote - Contractor) *12/2025 – Present*

- Orchestrated end-to-end data flows across data lakes (S3), OLTP/OLAP databases, and business platforms (CRM, Slack), building scrapers/scanners, API integrations, and ETL/ELT/Reverse ETL pipelines while redesigning sync logic and primary keys to eliminate duplicates and reduce synced volume to <1%.
- Architected core business pipelines across AWS EC2, dbt (via Airflow and GitHub Actions), and native Snowflake workflows, replacing nested views with materialized procedures and automating multi-source reconciliations to reduce query complexity from exponential to logarithmic and cut processing times from minutes/hours to seconds.
- Developed Dashboards-as-Code with automated context-aware AI summaries (Superset), dynamic applications for user interaction (Streamlit), and in-depth EDA, expanding company-wide data access while defining quantified benchmarks, categorization frameworks, and quantitative deep-dives.

Data Engineer (Consulting) | Siemens Advanta | Palma de Mallorca, Spain (Remote - Contractor) *02/2025 – 11/2025*

- Maintained and debugged Spark/Python/SQL pipelines on Azure (ADF, Blob, Databricks), processing billions of records for automated reporting.
- Developed 30+ financial Power BI reports (DAX, Power Query) on custom data models for Fortune 500 clients.

Data Scientist (Fraud & Pricing) | AB InBev (World's Largest Brewer) | Brussels, Belgium (Remote - Contractor) *08/2023 – 01/2025*

- Governed LATAM fraud data infrastructure through Spark/Python and SQL production pipelines in Databricks and Snowflake, enabling near real-time C-Suite reporting.
- Built anomaly detection models for fraud (Python, Scikit-learn), improving profitability by 3% in key markets.
- Ran causal inference experiments for pricing (A/B tests, RCTs), increasing sales volume by 0.5% in main markets.

Data Scientist (Corporate Finance) | Lumen Technologies | Buenos Aires, Argentina (Hybrid) *11/2021 – 07/2023*

- Built 10+ ETL pipelines (Python, SQL) automating Power BI reporting for 50+ financial stakeholders.
- Forecasted payments and cash flow (Random Forests, regression) for financial planning.
- Applied NLP to employee surveys (NLTK, spaCy) to identify attrition drivers for HR retention policies.

Quantitative Analyst (Algorithmic Trading) | Balanz Capital | Buenos Aires, Argentina (Hybrid) *02/2021 – 10/2021*

- Developed and backtested algorithmic trading strategies (Python, LSTM) for Argentine and U.S. markets.
- Built interactive financial visualizations (Plotly, Seaborn) to support trading desk analysis.

Education

Dip. Quant Finance (UCEMA, 2022) • **MSc Data Science** (UBA, 2021) • **MSc Finance** (UBA, 2019) • **BSc Business Admin.** (UNLZ, 2017)

Languages

Spanish: Native (C2) • **English:** Advanced (C1) • **German:** Intermediate (B1)
